

Knowledge Graph Test Document

This document is designed for testing entity extraction and knowledge graph generation systems.

Tech Ecosystem

OpenAI develops ChatGPT. ChatGPT uses Large Language Models. Microsoft invests in OpenAI. Azure provides cloud infrastructure for OpenAI. GitHub is owned by Microsoft. Developers use GitHub to manage software projects. Python powers many AI applications. TensorFlow and PyTorch support machine learning development.

Healthcare Domain

Doctors diagnose diseases. Hospitals provide healthcare services. Patients receive treatment from doctors. Artificial Intelligence assists doctors in medical imaging. Medical imaging detects abnormalities. Researchers analyze healthcare data.

Business Domain

DocuIntellect manages documents. Users upload documents to DocuIntellect. Elasticsearch indexes document chunks. Groq generates AI responses. RAG combines retrieval and generation. Knowledge graphs visualize relationships between entities. Analytics tracks user activity. Chat sessions store conversations.

Additional Relationships

Universities educate students. Professors teach courses. Students complete assignments. Companies hire graduates. Research labs conduct experiments. Data scientists analyze datasets. Machine learning models predict outcomes. Neural networks learn patterns from data. Knowledge graphs connect entities through relationships.
